

At your side in the emergency department

“In an emergency case,
every second counts.”

Handling the unexpected

In emergency care, you never know what to expect. At Dräger, we understand that initial diagnoses and treatment decisions in the emergency room can represent a patient's first and sometimes only opportunity for a favourable outcome. Regardless of the patient's initial condition, supporting you with reliable technology is our focus in emergency care.

Time is of the essence

Our cutting-edge solutions enable you to achieve more in less time. This lets you concentrate on your primary concern – the patient. Our emergency medical products and services are designed to streamline workflow and smooth transitions from primary care in the field to patient transport to the emergency room and beyond.

Different patients, one standard

Emergency patients come in all acuity levels. Ideally, medical device applications quickly and automatically adapt to a broad range of patient physiology and physiognomy. Our advanced software and hardware solutions let caregivers react faster and more effectively, regardless of the patient's age or acuity level.

Integrated strategies for effective emergency care

Patient management should work seamlessly throughout the continuum of treatment and begin with the patient's arrival in the emergency room. With an integrated portfolio of medical systems and services, Dräger can help improve process efficiency and increase your level of control over hectic and rapidly changing emergency situations.

“Life-threatening
situations require expert care
with **reliable technology.**”

Stefan Dräger

Jack, 44, shockroom manager

"A first-hand patient history
will save us time."

Henry, 29, male nurse

“Continuous, seamless clinical data acquisition is our new standard of care.”

“I hope the doctors can find out what’s wrong with me quickly.”

Eric, 50, patient

Customised ergonomic workplace design

- Workflow optimisation
- Intelligent space organisation
- Supply units and lifting systems with smart cable management

High standards for transport ventilation

- Full range of ventilation modes
- Integrated capnography
- Non-invasive ventilation (NIV)
- Full paediatric support

Rapid information access supports timely decisions

- Clinical information management with continuous remote access
- Patient data management and documentation with seamless monitor integration

Harmonisation reduces the potential for human error

- Standardised user interfaces, operating principles, nomenclature and accessories
- Optimal NIV masks and disposable breathing systems
- Smart solutions help avoid erroneous system connections

Faster, less disruptive patient transport

- Mobile bedside monitors
- Switch automatically from wired to wireless networking
- Continuous data feed into the hospital network

Customised lifecycle management solutions

- Scheduled preventive maintenance and remote services can maximize performance uptime
- Conformity assessed accessories and consumables
- Regular software updates and device upgrades

“Dräger has helped make
 our department both safer
 and more efficient.”

We can help you achieve measurable positive impact

Respiratory care from rescue to recovery

Dräger mobile ventilation systems let you ventilate invasively and non-invasively in the field and during transport. For patients requiring intubation, integrated capnography helps confirm correct placement of the endotracheal tube and effective ventilation. Automatic flow management applications control tidal volume delivery and support spontaneous breathing for improved patient safety, comfort, and recovery.

Ergonomic workplace design for process efficiency and safe environment

Dräger supply systems support an organised workspace and give emergency departments the flexibility they need. They are designed to allow easy access to both patients and equipment in a fast-paced environment. Vertical supply systems let you get the most out of the available space and improve workplace ergonomics.

Cutting-edge monitoring system technology for continuous surveillance

Our personal patient monitors provide seamless presentation and record of clinical data at the bedside and during transport which even helps reduce time consuming disconnection and reconnection of cables and sensors. This supports both patient safety and smooth transport. Clinical data, uploaded to your hospital information system from the time of admission, can be used to facilitate future treatment decisions.

Product and service portfolio

MT-1724-2008

Workplace design with built-in flexibility

Supply units and lifting systems, minor procedure lights and monitor docking stations

MT-5609-2008

Medical devices and tailored technology solutions for emergency and transport situations

State-of-the-art transport ventilation with full NIV capability including leak compensation, AutoFlow, integrated capnography and full paediatric support. Compact anaesthesia platforms for treatment rooms

D-19701-2009

Clinical information management

Continuous surveillance and data collection, remote access to vital signs, mobile bedside monitors and seamless transition from wired to wireless

D-22375-2010

Decision support on the go

Web-based, bedside applications, real-time monitoring, full access to clinical data during transport and continuous data export capability

Life cycle management solutions support peak performance

Customised service programs including preventive maintenance and remote service support, upgrades and updates, reusable and disposable accessories and consumables, special training and education programs
