

VISIONiD

Empowering Enterprise Intelligence

We empower healthcare professionals, allowing more time for vital treatment and care, while optimising tracking and accuracy

Perhaps no organisational territory requires greater accuracy and precision than healthcare. Here, the downsides can be massively consequential. Data recording errors, record misplacement or asset loss can impact very seriously on individual medical outcomes.

Our innovative, technology solutions, custom-specified for the medical environment enhance record keeping, patient care and patient safety.

This is true people first technology.

Empowering Enterprise Intelligence

Established in 2000, VisionID is a leading system integrator providing technology solutions to the healthcare sector.

VisionID's holistic approach draws together rugged, mobile voice and data technology, networked collaboration tools and instant record access to empower clinical, paramedic and administrative staff across any facility. Harnessing the potential of the Internet of Things (IoT) where integrated tools including barcoding, RFID, mobile computing and WLAN are seamlessly networked, we can enhance patient safety, improve employee productivity, and upgrade the efficiency of your operations. Our solutions provide your caregivers with visibility into patient records, specimens, medications, equipment and staff whereabouts, from the time your patient is admitted to the time you sign their discharge. Providing caregivers with the real-time information they need to make better decisions and improve patient outcomes.

VisionID's bespoke, real-time data solutions help to improve patient safety, streamline clinical workflows and enhance hospital efficiency.

OUR HEALTHCARE-SPECIFIC SOLUTIONS INCLUDE:

Patient ID & Tracking

Safety starts with positive patient ID. Gain complete visibility of each patient journey through your hospital by ensuring accurate identification throughout. Use wristband scanners, printers and mobile computers for immediate access to definitive information at all times across all departments.

Specimen Tracking

Eliminate the risk of wrong diagnosis or incorrect treatment due to mislabelled samples. Provide powerful hardware, including mobile workstations and devices, to print, apply or scan identification labels at the point of care, assuring accuracy and ensuring patient safety.

Pharmacy Management

Verify and record medication being dispensed to remove errors, ensuring the correct patient receives their correct drugs at the correct dosage. Effectively control medication distribution through inventory management solutions using barcode systems, mobile devices and our customised visibility platform.

Supply Chain Management

Gain complete visibility of vital medical stock throughout the supply chain. By integrating inventory control system with barcode and RFID technology along with mobile computers and barcode scanners, it will improve accuracy for medical inventory. Your healthcare professionals can quickly and accurately take inventory on a daily basis, ensuring they have complete visibility of medical supplies that they have on hand.

Asset Management

Identify and track vital equipment throughout your hospital ensuring staff have access to all supplies and assets when needed. Utilise a barcode and RFID tagging system along with our visibility platform to reduce searching for misplaced equipment, allowing more time to focus on patient welfare.

Staff Communications

Keep caregivers connected to each other and to vital patient data for better quality care. Voice and data mobile devices allow accessing, updating and sharing of information in real time. Make collaboration more effective and efficient, streamlining diagnosis and advancing treatment options.

Professional Services

Ensure that you have continuous support with our experienced, qualified professional services team. Our engineers will support you through every stage of the process from site audits and surveys to deployment, right through to aftercare with onsite or workshop repairs and maintenance. We understand how vital it is to ensure your solution to be fully operational at all times.

TESTIMONIAL

Waterford Regional Hospital

"In 2013, we updated our patient administration system to be in line with the HSE's National Integrated Patient Management System. By moving to the new IPMS it enabled us to implement barcode technology to identify and track patient's activity throughout the hospital. VisionID provided us with wristband printers and barcode scanners with an anti-microbial finish. From start to finish VisionID provided a professional service and supported us in seamlessly implementing the technology within our operations."

Why clients turn to VisionID

- › Errors in patient IDs, medication and treatment notes due to manual record keeping and poor handwriting can have serious medical outcomes
- › Tracking down misplaced medical equipment deflects skilled personnel from vital patient care
- › Lost or incorrectly filed paperwork degrades care levels and wastes highly-trained professionals' time
- › Incorrect labelling, data integrity issues, or mislaid tissue or blood samples impair treatments, undermining confidence and efficiency

How we can make a vital difference?

Our solutions are designed specifically to connect caregivers and effectively track patient progress, equipment, facilities and costs. Eliminating human error while providing instant, detailed records of the movement of assets, staff and patients.

We've a proven track record in the healthcare sector, with in-depth knowledge of the organisational challenges and the expertise to custom-design and implement practical, intelligent data solutions.

Our healthcare solutions are fully integrated, developed by experts and are secure, robust, reliable and most importantly, healthcare compliant.

Our designated Account Managers and expert support staff assure such vital data infrastructures are robust and streamlined.
