ELI 380

ELECTROCARDIOGRAPH

# ELI 380

Solving the challenges of *TODAY*.

## KEY ADVANTAGES:

### CLINICAL SUPERIORITY

- The world-renowned VERITAS™ Resting ECG Interpretation Algorithm offers impressive diagnostic ECG performance.
- Best-in-class signal acquisition technology exceeds published requirements providing increased ECG data accuracy.
- Mortara Critical Values enable a clinician to quickly and easily identify high-risk patients needing immediate attention.

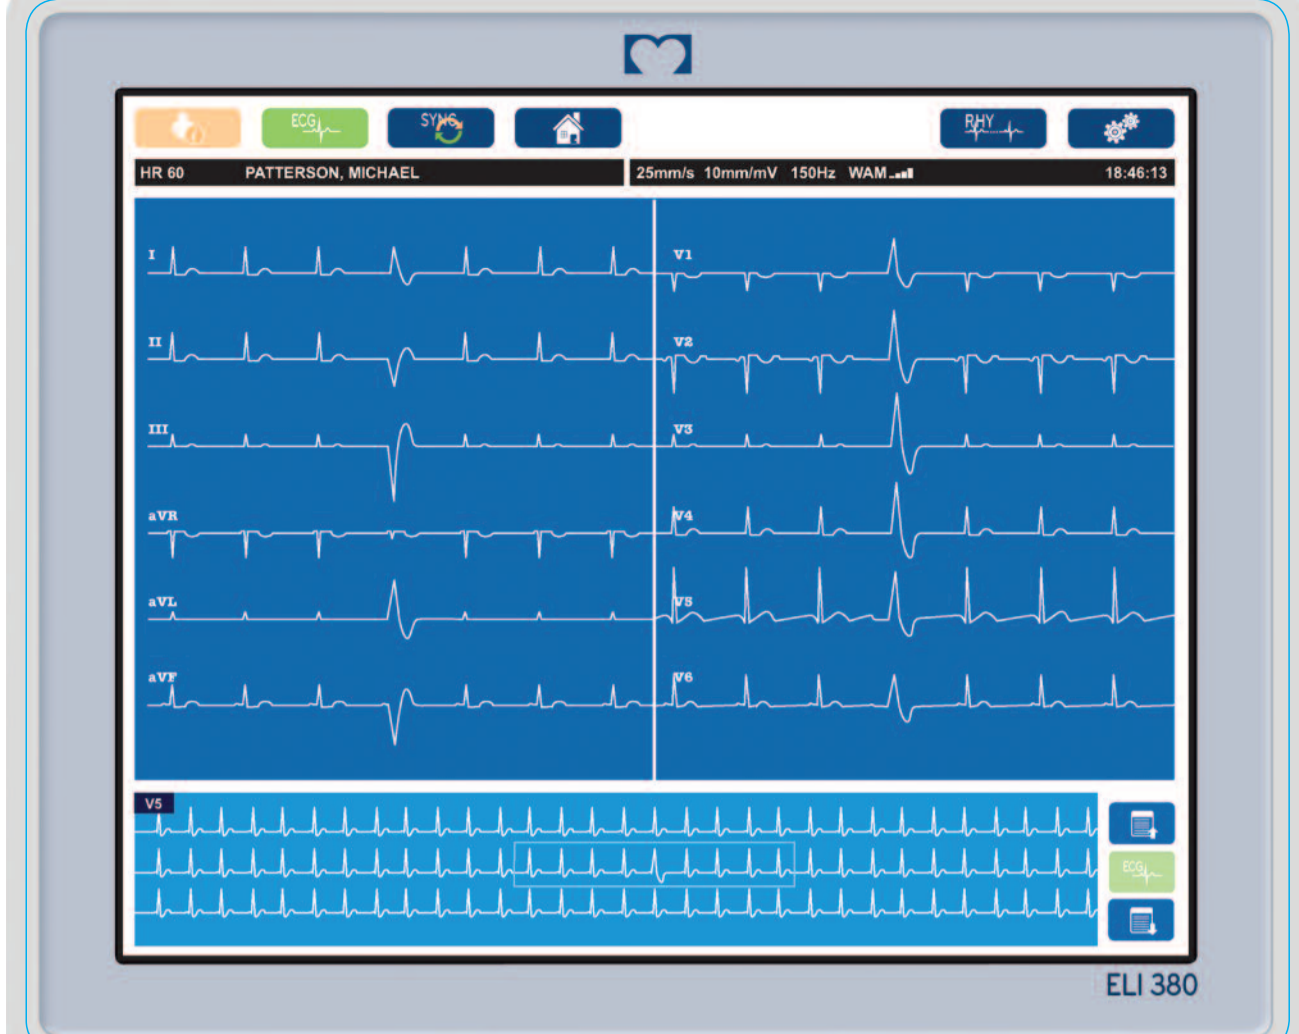

### STREAMLINED WORKFLOW

- One-touch “SYNC” function transmits ECGs and receives orders for specific care areas.
- Demographic pre-population via DICOM® Modality Worklist, ADT or barcode scanner reduces the steps necessary to get started.
- STAT ECG function enables ECG acquisition with the touch of a button.

### SOLUTION-BASED DESIGN

- Large, bright 17-inch color display with backlight LED maximizes available data and visibility.
- Glass keyboard with touchpad promotes improved infection control compared to traditional keyboards.
- Lead reversal detection identifies limb and chest lead reversals in real time, a common error in high-volume, fast-paced departments.

## ECG - AS EASY AS 1, 2, 3.

### 1. HOOKUP

Using the WAM™ (Wireless Acquisition Module), technicians no longer need to navigate the electrocardiograph within tight spaces. Instead, keep the cart outside of the care area and initiate the ECG right at the WAM, an ideal feature for isolation patients.

### 2. DEMOGRAPHIC IMPORT

Barcode-based workflow does away with time-consuming searches and makes upload of patient specific information fast and accurate.

### 3. ANALYSIS

Mortara's innovative Best 10 feature determines the most noise-free ECG data recorded and automatically displays the ECG, reducing both review time and the likelihood of repeat ECGs.

ELI™, Mortara®, VERITAS™, and WAM™ are trademarks or registered trademarks of Mortara Instrument, Inc.

DICOM® is the registered trademark of the National Electrical Manufacturers Association for its standards publications relating to digital communications of medical information.
